Submitted (MAR-2002) to the EMBL/GenBank/DDBJ databases.

-!- SIMILARITY: Contains 1 C2 domain.

-!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry whice preliminary data.

EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry whice preliminary data.

$73818
hypothetical protein H91_orf216 - Mycoplasma C; Species: Mycoplasma pneumoniae
A; Variety: ATCC 29342
C; Date: 27-Feb-1997 #sequence_revision 25-Apr C; Accession: $73818
R; Himmelreich, R.; Hilbert, H.; Plagens, H.;
Nucleic Acids Res. 24, 4420-4449, 1996
A; Title: Complete sequence analysis of the ge A; Reference number: $73327; MUID:97105885; PM A; Accession: $73818
A; Status: preliminary; nucleic acid sequence A; Molecule type: DNA
A; Residues: 1-216 < HIM>
A; Note: the nucleotide sequence was submitted C; Genetics:
A; Genetic code: SGC3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A; Reference number: Z188

C48652

transfer protein spdA - Streptomyces ambofaciens plasmid pSAM2

C; Species: Streptomyces ambofaciens

C; Date: 03-May-1994 #sequence_revision 03-May-1994 #text_change 09-Jul

C; Accession: C48652; S33428

R; Hagege, J.; Pernodet, J.L.; Sezonov, G.; Gerbaud, C.; Friedmann, A.;

J. Bacteriol. 175, 5529-5538, 1993

A; Title: Transfer functions of the conjugative integrating element pSA

A; Reference number: A48652; MUID:93374848; PMID:8366038

A; Accession: C48652

A; Status: preliminary

A; Molecule type: DNA

A; Residues: 1-224 < HAG>

A; Cross-references: UNIPROT:Q07193; EMBL:Z19593; NID:g298051; PIDN:CAA

T12738
ATP/GTP-binding protein 22 - Methanobacterium phage psiM2
C;Species: Methanobacterium phage psiM2
C;Date: 13-Aug-1999 #sequence_revision 13-Aug-1999 #t.
C;Accession: T12738
R;Pfister, P.; Wasserfallen, A.; Stettler, R.; Leising submitted to the EMBL Data Library, May 1998
A;Description: Archaeophage PsiM2 complete genomic DN.
A;Reference number: Z17578
A;Reference number: Z17578
A;Residues: translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Residues: 1-144 <PFI>
A;Cross-references: UNIPROT:O80212; EMBL:AF065411; NII
A;Experimental source: host Methanobacterium thermoautorium phage psiM2 hypothetices: C;Keywords: nucleotide binding; P-loop
F;34-41/Region: nucleotide-binding motif A (P-loop)
                       T17931

IgA Fc receptor-like protein A428L - C;Species: Chlorella virus PBCV-1
C;Species: Chlorella virus PBCV-1
C;Date: 15-Oct-1999 #sequence_revisic
C;Accession: T17931
R;Graves, M.V.; Van Etten, J.L.
submitted to the EMBL Data Library, NA;Reference number: Z18806
A;Accession: T17931
A;Status: preliminary; translated from A;Molecule type: DNA
A;Residues: 1-145 <GRA>

                                                                                                                                                                                                        AAB08324-36 represent epitopes derived from a Chlamydia pneumoniae protein. The protein, immunogenic fragments of it, nucleotide sequences encoding it, or inhibitor specific against it are used to manufacturing medicament for the treatment of infection due to C. pneumoniae. An antibody specific against the protein can diagnose a C. pneumoniae infection. C. pneumoniae infection can be prevented. Artherosclerosis, including coronary atherosclerosis, caused by C. pneumoniae can also be prevented or treated. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                           preventing and treating C. pneumoniae including coronary atherosclerosis.

C. pneumoniae strain YK41 was cultured and genomic DNA extracted to prep. a lambda gtll DNA library. The library was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma P3/NS1/1-Ag4-1 to produce a MAb expressing hydridoma. The DNA obtd. was then fused with the expression vector pADA431 to give pCPN533alpha. The plasmid was used to transform an E. coli host, which was cultured to give the antigenic polypeptide, polypeptide A. Polypeptide A and primers and probes derived from its DNA can be used in assays for the detection of polypeptide A antibodies and DNA, respectively, useful in the diagnosis of C. pneumoniae infection. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-SEP-1994;
